QUALIFICATION

BACHELOR OF TECHNOLOGY MECHANICAL ENGINEERING Jawaharlal Nehru Technological University Aggregate (%): 68	2014
BOARD OF INTERMEDIATE EDUCATION Dr. D.Y.Patil Jr. College Aggregate (%): 70	2010
SECONDARY SCHOOL CERTIFICATE Fort International Academy Aggregate (%): 86	2008

TECHNICAL SKILLS

Software:

- MS-office (Windows, Word, Excel, Power Point)
- MS Project
- AutoCAD
- Pro-E Wildfire Software skills
- CARRIER-20(HAP) - Heating & Cooling load calculations
- McQuay - Duct & Pipe sizing and Psychometric analysis
- Engineering Power Tool - Pipe sizing

Machines:

- Mill, Lathe

Language:

- English and Hindi

EXPERIENCE**ALKA GRANITES**

Controller

07/2013 to 09/2014

- Controlling of Machines.
- Scheduling and arranging of Granite Slabs.

MEP, Dhanush Engg Services

HVAC Designer

05/2013 to 06/2013

- Calculation of heat load.
- Designing of duct route and sizes.

PROJECTS**MAJOR PROJECT:****Design of car A/C running on non-conventional source of energy.**

- Main aim of our project was to keep the inside temperature equivalent to outside temperature. If car is parked in parking area in direct sunlight by closing all windows, inside the temperature increases up to 60 to 70 Deg. But our comfort temperature is 23 Deg, for getting down that temperature it takes time and required lot of cooling load. For avoiding that problem we designed an exhaust fan working on solar energy. It sucks the inside hot air and it maintains outside air temperature.
- When car is parked in sunlight, fan will be controlled by thermostat of which the temperature is set to outside air. By using this fan system we can reduce cooling load required for car while it is in parking. We can increase car mileage by this system. Software we used in this project was Pro/Engineer for modelling, assembly, drafting.
- In this project we did the experiment from morning 12AM to 5.30PM. We got some great results that there was a difference of 33degree. Also we calculated amount off heat generated inside the cabin. The sunlight is diminished after 4PM at that time battery were used for running the fans. We tested the battery for the time it has worked and It worked for 2.5 hours after sunlight are diminished.

MINI PROJECT:**Detailed study of HVAC system.**

- In this I learnt completely about HVAC System, how it runs, installed, designed. I did 2 projects in which calculating of heat load was done and selecting of the system. duct desinging was done. It is important in the design of medium to large industrial and office buildings.

PERSONAL SKILLS
